**Deeply invested  
IN ARCHITECTURE**

**MAKING CONCEPTS A REALITY**

*We are committed to developing the plans we show you on paper and bringing them to life.*

## **GREEN CERTIFICATION**

*We aim for all our new buildings to achieve a BREEAM Very Good or Excellent certification for sustainability.*

*That is a high bar we have set ourselves, but we are committed to being an industry leader when it comes to sustainability.*

GLP

## SUSTAINABLE WORKING ENVIRONMENT

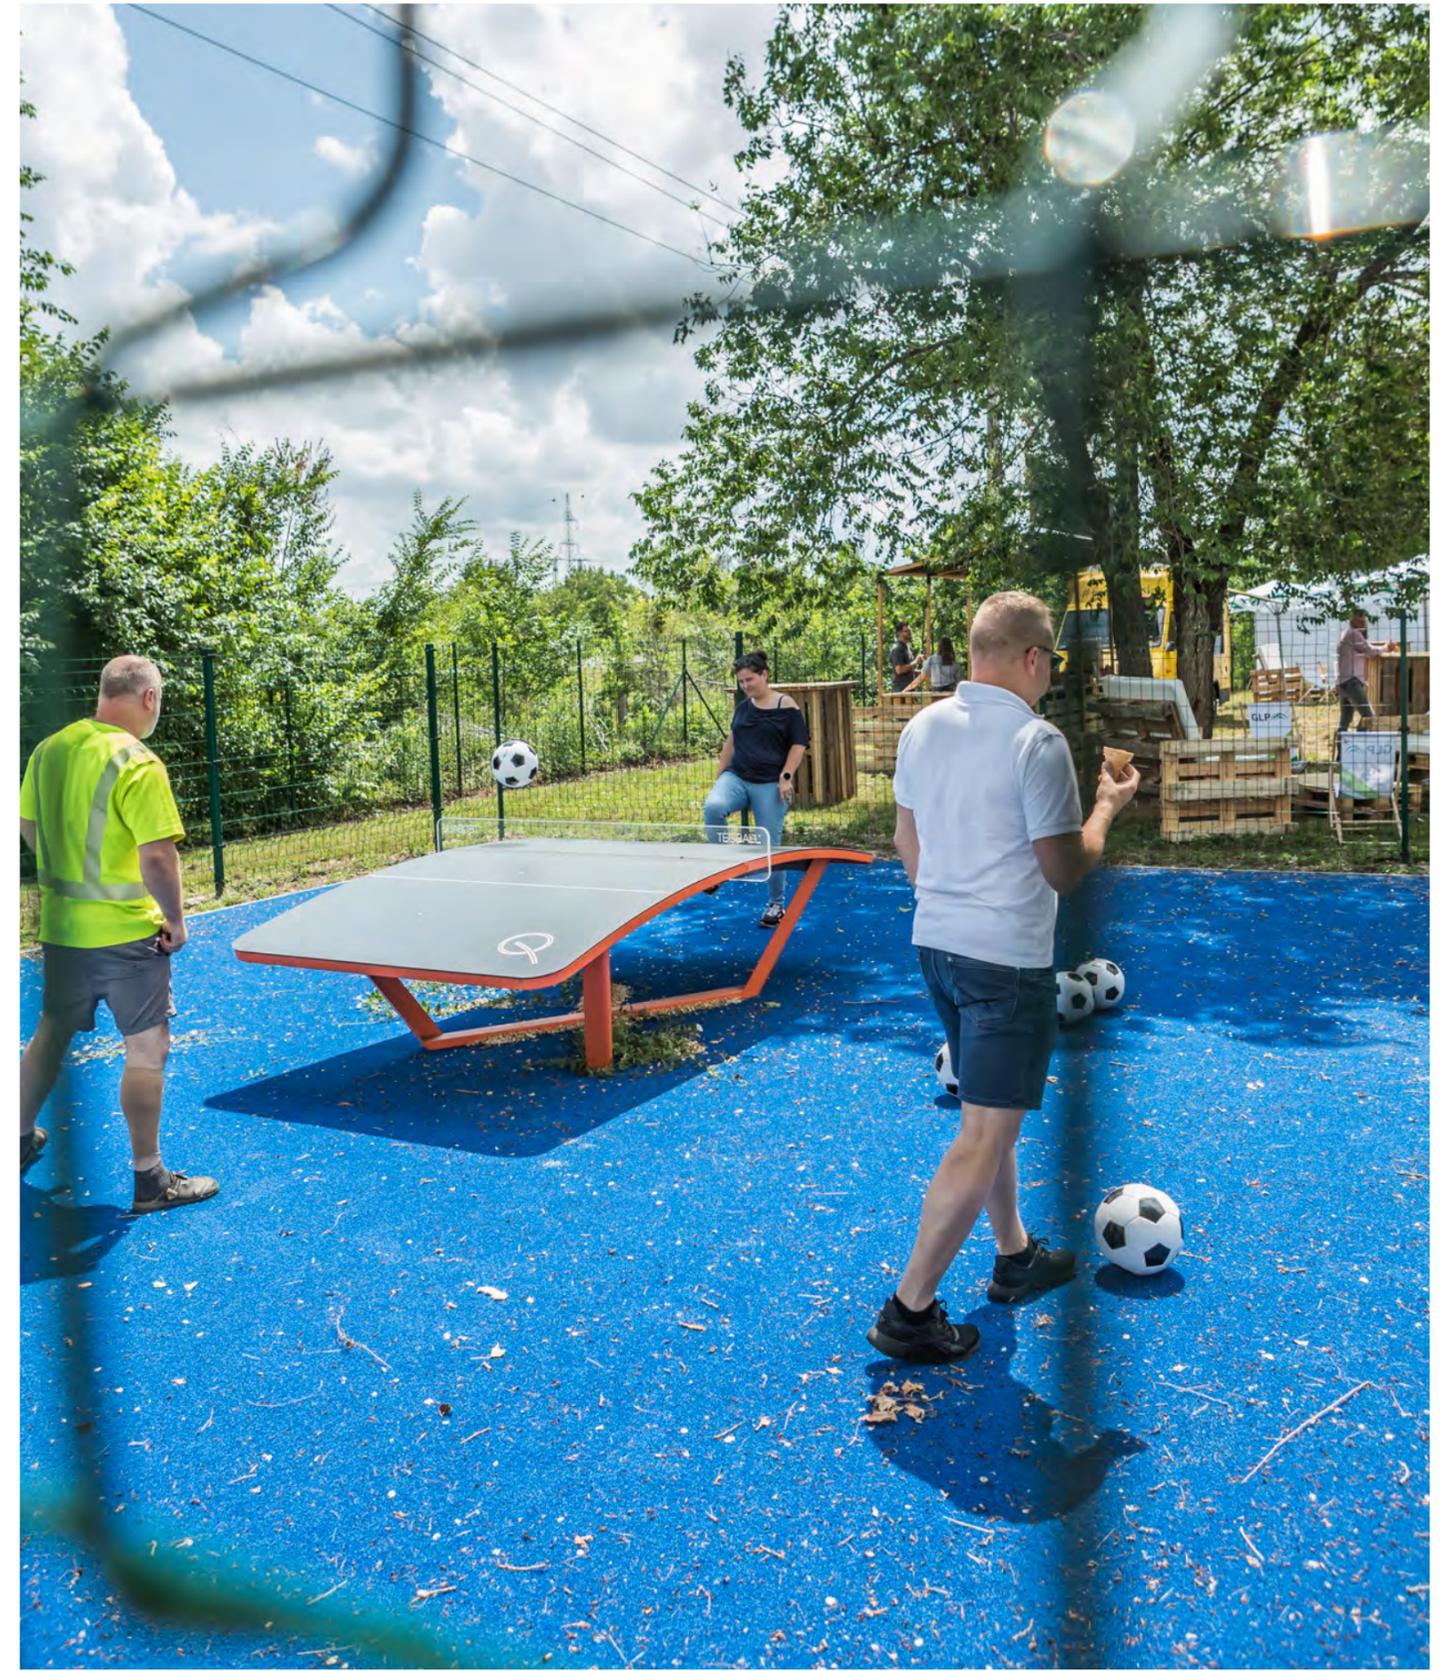

*Landscaping using regionally sourced plants helps to create a more natural (and human) setting for the building, with recreational areas, opportunities to create gardens, and even to set up beehives. It promotes wellbeing, social connections, and makes the building a great place to work and do business.*

DEEPLY INVESTED IN ARCHITECTURE

## **PHOTOVOLTAIC INSTALLATION**

*Our buildings has photovoltaic-ready roofs. Maximizing the power of the sun with photovoltaics and solar thermal heating cuts costs and carbon emissions.*

## **EFFICIENT LIGHTNING**

*We maximise natural lighting in both office and warehouse spaces, not just to cut costs and help regulate temperature, but to promote health and wellbeing for all workers and visitors.*

*All artificial lighting is LED-based and reduces maintenance demands, as well as operational costs.*

## EV CHARGING STATIONS

*We know that electric vehicles are the future of transport. It all started with one of our e-commerce partners, who were willing to install parking for electrical vans, equipped with charging stations.*

## WATER SOLUTIONS

*Harvesting rainwater reduces the demand our building places on the local water supply. Grey water can be used for toilets, irrigation, the washing of vehicles, and more.*

*To combat contamination issues or in cases of limited access to public plumbing infrastructure, we install water and wastewater treatment plants on site.*

# INVESTMENTS IN THE INFRASTRUCTURE

*Wherever we go, we make sure to improve the existing infrastructure to make transit easier, not only for our customers but also for all our neighbours.*

## **WE INVEST IN:**

*construction or reconstruction of roads, bypasses, intersections, roundabouts,  
expansion of local roads and sidewalks,  
building cycle paths,  
park improvements in the vicinity of municipalities,  
construction of biocorridors.*
